STATUS OF ELETTRA

A. Wrulich

Two years have been passed now since the start of ELETTRA commissioning. At present the storage ring is dedicated for more than 80% of its operations time to beamline commissioning and scientific experiments.
The work performed in order to increase the reliability and the performance of ELETTRA is presented, and a review is given on the operational experience of the last year. An outlook summarizes the improvements on the accelerators envisaged for the future, and possible new developments.
